Last week, I had the opportunity to attend **Cybersec Europe**, and what an inspiring experience during 2 days,

Many fascinating topics were discussed throughout the event : Zero trust and AI-driven security to cloud, behaviour, and NIS2. Some conversations were delivered with real panache such as Arno from **Junglemap**, and reflected the passion and expertise driving the cybersecurity ecosystem forward.

Beyond the technology itself, what stood out the most were the people. I had the chance to meet talented professionals, exchange ideas, and connect with individuals who are shaping the future of this industry every day.

Looking forward to grow and evolve within this 'not that easy but beautiful' ecosystem !

Had a great time at **Cybersec Europe** over the past two days. I was genuinely surprised by how much my cyber-network has grown in the past year. So many familiar faces, good catchups, and a few great opportunities to finally meet people beyond the world of Teams. (because don't we all agree that meeting in person is 10x better?!)

Booths were also very fun and playful, a great way for exhibitors to express their message and show what they have been up to across the space.

Already looking forward to the next one!

Cybersec Europe 2026 – Wrapped up yesterday in Brussels.

As CEO & Co-Founder of Winston Technology Zone, I had the privilege of attending in person – and what an energizing few days it was.

Great collaboration discussions with several European cybersecurity companies. The interest in expanding into high-growth markets is real, and I'm pleased to say Pakistan – specifically Winston Technology Zone – is firmly on the map.

We're now actively looking to partner with European cybersecurity firms ready to scale into Pakistan. Our tech zone offers the ideal gateway: a young digital economy, strong local demand, and a supportive ecosystem for international players.

If we connected in Brussels (or even if we missed each other), let's continue the conversation. The door to Pakistan is open.

DM me or comment below – let's build a safer digital future, together.

Day 1 at **Cybersec Europe** was great! Definitely felt bigger and busier than ever.

Spent the day walking around in the **Brussels Expo**, talking with **#vendors**, meeting people from the industry and following a couple of sessions on the main stage and in the theaters. A lot of interesting conversations and good insights throughout the day.

One thing you really notice this year: **#AI** is everywhere. Every product, every topic, every presentation somehow comes back to AI. Some of it feels overhyped, some of it feels like a marketing buzz(word), but there are definitely some genuinely interesting ideas out there if you look past the noise.

One thing that actually stood out to me was the prompt security from **SentinelOne**. That's something I'd really like to test out more because securing AI interactions is clearly becoming a serious topic for some of our clients.

Also really nice unexpectedly (not surprised though 🥰) running into my former lecturer **Jan** again. Funny how small the **#cybersecurity** world actually is sometimes.

And a pretty cool way to end the day as well: winning the Jimber award for "Most Promising Partner of 2026." 🏆

Would've loved to go back tomorrow for Day 2, but duty is calling 😊.

Day 1 at **Cybersec Europe** done ✓.

Really interesting to see how many organizations are actively rethinking their security posture, preparing for the new AI era and protecting the European cybersecurity landscape better than ever, and through cooperation.

Usually the best moments at these events happen outside the main stage. Today was an exception. Every session I attended was genuinely insightful.

Also great to reconnect with existing **Security Reporter** partners and meet new ones along the way.

Looking forward to day 2 and more conversations around offensive security, pentesting, and cyber resilience 🚀
